

Role: Technical Business Analyst

Business Area: Product & Engineering

Location: London or New York

Validis is a dynamic fintech company with an industry leading software platform for the extraction and standardisation of accounting data. Validis, which has UK and US based operations, has a blue-chip client base, mainly comprising audit firms and financial institutions who utilise the software to gather financial information from their SME clients. The company has experienced significant growth since its inception in 2015. As part of this growth, it is expanding its team and needs support across a number of strategic areas.

The Technical Business Analyst role is an essential position in our product team, helping us understand the business and technical challenges within our clients' industries, and producing functional requirements that help deliver world-class solutions to the market. The role bridges the gap between a deep understanding of detailed data requirements and delivering propositions that deliver tangible business value.

Responsibilities:

- Data analysis and mapping of large data sets and complex sources (accounting, financials, and more).
- Identify, interpret and document (as a Business Analyst) the detailed regulatory and financial compliance needs and calculations within the SME market
- Producing functional specifications, sequence diagrams, process maps and user stories
- Act as the key bridge between our product and engineering functions ensuring our cross functional software development teams consistently deliver value-driven outcomes.
- Conduct walk-throughs, testing and assist in verifying the changes implemented are correct.

The successful candidate:

- Proven experience working as a Business Analyst in a software / product environment
- Technical background with demonstrable experience of data analysis and system integration
- Strong experience with Excel, SQL, Python, R, and other data analytics tools
- Demonstrable evidence of analysing and documenting complex business processes

- Skilled at writing requirements specifications in Epic and Story format for both user interface and backend / API driven processes
- Experienced in working across multiple delivery workstreams practicing distributed development in a global environment
- Excellent communication and relationship building skills

Diversity is critical to our business, and we believe unbelievable talent should have a level playing field in which to shine – this equally applies for everyone. No matter who you are, where you're from, how you think, or who you love. We believe you should be you.
